

Quick Reference – Do I Need To Install Anything on My Website for My Widgets To Work

WidgetMakr does not require any special plug-ins or fancy software to work. All you need to do is place the embed code on your site where you want the widget to appear. For example, if you are placing a sidebar widget on your WordPress blog, you simply have to add a text/HTML widget to your sidebar and copy paste the embed code directly into the text/HTML area and save.
